

Essential Shelf

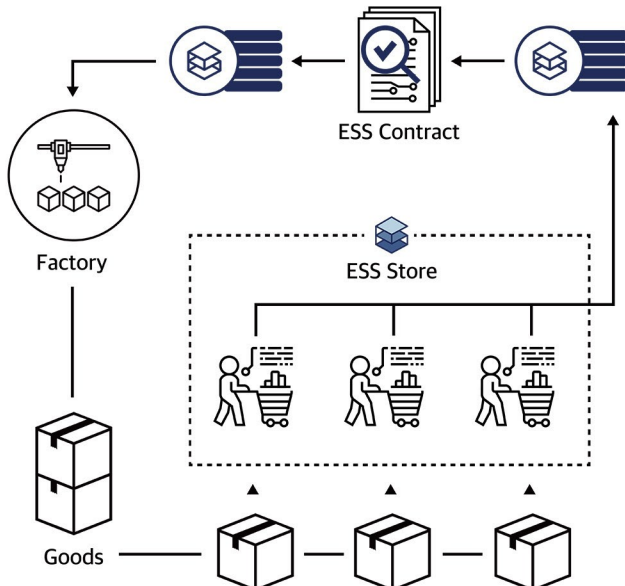

essentialshelf.com

The Essential Shelf project was created to implement the latest technologies to provide essential supplies most efficiently, directly, and quickly, to the people that need them the most.

The ESS platform builds a Hybrid Supply Chain Management system ("HSCM") verified by blockchain to track the delivery and quality of goods from vendor to consumer.

To further facilitate Direct to Consumer ("DTC") global trade to the local levels, the ESS Store implements a group bulk purchase feature for vendors that have completed the ESS Vendor Program.

The world has changed.

The current COVID-19 Pandemic and other recent disasters have made it clear that as much as the world has "shrunk" with improved supply chain distribution systems, access to supplies during and after emergencies is still plagued with technical and logistical problems.

Essential Shelf completes purchase orders previously failed due to the lack of communication and trust between seller and purchaser.
